Career Objective

Developer with practical experience shipping real websites and handling full-stack deployments. I enjoy writing clean code, solving problems, and working closely with clients. Looking for a full-stack role where I can contribute meaningfully and grow further.

Skills

Web Stack: HTML5, CSS3, Tailwind CSS, React.js, Next.js, Axios
Java Full Stack: Core Java, JDBC, Servlets, JSP, Spring, Spring Boot, Hibernate, REST APIs
Backend & Database: Node.js, Express.js, RESTful APIs, JWT Authentication, Oracle SQL, MongoDB, Mongoose
Languages: C++, Java, JavaScript
Cloud & DevOps: AWS, Microsoft Azure, Azure DevOps, CI/CD Pipelines (Classic & YAML), Docker
Tools & Others: Git, GitHub, Postman, HTTPie, System Design

Professional Experience

Sprintofy Full-Stack Engineer — Forward Deployed Engineer
Feb 2026 – Present

- Worked directly with clients to understand business requirements, map existing workflows, and translate them into technical solutions.
- Designed and developed a custom packaging-industry ERP around a client's specific business processes, operational workflows, and requirements.
- Collaborated with stakeholders to refine ERP modules, workflows, data relationships, and system behavior based on real-world business requirements.
- Built and deployed production web applications, including playnear.in and hesprosports.com.
- Managed complete VPS deployments, setting up frontend, backend, database, and production environments from scratch.
- Developed responsive React + Tailwind applications with REST API integrations, dynamic routing, and reusable component architecture.
- Debugged and resolved complex state-management, type-safety, API-integration, and deployment issues in production environments.

Projects

LIBRARY MANAGEMENT SYSTEM (Full Stack Project)
Library Management System (Java 17, Spring Boot, Spring MVC, JSP/JSTL, Spring Data JPA, MySQL, Spring Security, JWT)

- Built a production-ready REST API with clean controller → service → repository separation, DTOs, request validation and global exception handling.
- Implemented Spring Security with JWT and librarian-versus-member authorization, plus borrowing and returning with due-date and fine calculations.
- Added pagination, sorting and multi-criteria search with JPA Specifications, alongside JUnit/Mockito unit tests and API integration tests.

FINCORE TRANSACTION MANAGEMENT SYSTEM (Full-Stack Project)
FinCore FinTech API + Dashboard (Java 17, Spring Boot 3, Spring Security, JPA/Hibernate, MySQL 8, Flyway, React, TypeScript)

- Built transactional transfer engine with pessimistic row locking, DB-backed idempotency, and double-entry ledger (1 debit + 1 credit per transfer).
- Implemented session-cookie auth with BCrypt, CSRF, RBAC, and ownership checks; added admin freeze/unfreeze, audit trail, and CSV statements.
- Verified with 13 passing backend tests including 10-thread concurrent overspend test, plus React typecheck and production build.

SUBSCRIPTION MANAGEMENT API (Backend Project)
Subscription Tracker REST API (Node.js, Express.js, MongoDB, Upstash, Arcjet, JWT, Nodemailer)

- Built a production-ready backend for managing user subscriptions and plans.
- Implemented secure authentication, rate limiting, and abuse protection.
- Integrated email notifications and background processing.

MULTI-TENANT SAAS PROJECT MANAGEMENT PLATFORM (NEXT.JS)
Full-Stack Multi-Tenant SaaS (Next.js App Router, TypeScript, Prisma, PostgreSQL, Stripe, Clerk, Tailwind CSS, shadcn/ui)

- Built a production-ready multi-tenant SaaS with organization workspaces, role-based access control (Owner/Admin/Member), and strict data isolation using Prisma + PostgreSQL.
- Implemented Stripe subscriptions with webhooks, Customer Portal, and feature gating, alongside Server Actions, React Server Components, and optimistic UI updates.
- Developed drag-and-drop Kanban boards, real-time task management, email invitations (Resend), analytics dashboard, soft deletes, and audit logs with TypeScript strict mode and Zod validation.

AI EXPENSE TRACKER (FULL STACK) Live: cocowallet-lovat.vercel.app

AI-Powered Personal Finance Tracker (Node.js, Express, TypeScript, MySQL, Google Gemini, React)

- Built a production-grade REST API with TypeScript, Express 5, MySQL (connection pooling), JWT authentication (access + refresh token rotation), and comprehensive security (Helmet, rate limiting, Zod validation, HPP).
- Integrated Google Gemini 2.0 Flash for intelligent expense categorization, AI-generated budget suggestions from historical spending, and natural language financial queries.
- Implemented advanced features including bulk CSV import (up to 1000 expenses), real-time spending statistics, category-based budgets, soft deletes, and Swagger/OpenAPI documentation.
- Designed modular, scalable architecture with structured logging (Pino), request tracing, and full TypeScript strict mode + Jest test suite.

Certificates & Coursework

Full Stack Software Developer – **IBM** link
Backend Development– **IBM** link
Fundamentals of Deep Learning – **NVIDIA** link
Advanced course on Green Skills and Artificial Intelligence – **EDUNET FOUNDATION** link
Smart India Hackathon(SIH) 2025 link
Data Structures& Algorithms,Database Management Systems,Operating Systems,Computer Networks.

Education & Extra Curricular

Vishwakarma University : BTech Computer Engineering 2026 CGPA-**8.22**
Participated in ALL India hackathon(SIH) 2 times, CTF competition, 3rd place in Internal hackathon, Volunteered for India First Tech Challenge (FTC).
